

Better Information, Better Healthcare

This medical facility is participating in the Contexture health information exchange, which gives qualified medical professionals access to accurate, up-to-date patient information, and helps them provide better quality care. HIPAA-covered providers who are caring for you can access your data; this is a very secure, controlled and private network.

An example of how this could help you:

If you have a medical emergency, doctors and emergency medical professionals might use the health information exchange to instantly access your important health records, including allergies, medications and medical conditions. This information helps doctors provide better care and could even save your life.

Make a Meaningful Choice

You can choose to opt out and not to make your health information available. By making this choice, your health information will not be accessible to providers who use Contexture's health information exchange.
