Funding Available to Join the Colorado Health Information Exchange

LIMITED TIME FUNDING!

Your practice or hospital may be eligible to participate in this initiative that expands health information exchange (HIE) in Colorado.

Implementation Fees Covered by HCPF

Eligible Medicaid providers may receive funding from the Colorado Department of Health Care Policy and Financing (HCPF) to cover Contexture HIE implementation fees.

HCPF funding may cover implementation fees for organizations new to the HIE, as well as current HIE participants wanting to expand their HIE usage with new solutions. Funding is available for implementation fees and does not cover ongoing HIE subscription fees.

Funding can cover implementation fees for Contexture's most widely used HIE solutions:

- **Data Sender** - Share CCD & HL7 data with the HIE for a more connected, efficient care ecosystem
- **PatientCare 360®** - Web-based portal that offers a comprehensive view of a patient's clinical, behavioral, and specialty history
- **Results Delivery** - Patient results are sent directly to your EHR
- **Notifications** - Receive ADT and/or clinical event notifications

This list is not comprehensive. Ask your Contexture Engagement Manager for additional options.

Why Join the Colorado HIE?

Gain a more complete view of your patients by accessing records from a broad network of healthcare organizations, including those outside of your immediate network. Available information includes laboratory, radiology, and pathology results, hospital face sheets, admissions, discharges, transfers (ADT) information, specialty visits, transcription notes, continuity of care documents, and allergy and medication information.

Comprehensive Data in One Place

All shared CCD (continuity of care documents) and HL7 data are accessible through the PatientCare 360 Portal, which delivers a single, comprehensive view of a patient.

- Access patient data across care settings in one place
- Reduce manual record requests and administrative burden
- Improve care coordination and follow-up
- Support quality reporting and reimbursement efforts

PatientCare 360® helps organizations translate shared information into practical insight, supporting informed decision-making for clinicians and care teams.

Results Delivery provides patient results and timely care updates delivered directly to your EHR, reducing delays and manual data entry and giving providers faster access to critical patient information.

Customizable **Notifications** for admissions, discharges, transfers (ADT), and other important events help support proactive follow-up, coordinated care, timely decision-making, improved outcomes, and reduced costs.

Connecting CCD and HL7 Data Through Contexture

Contexture enables healthcare organizations to share both CCD and HL7 event data through the HIE, creating a more complete and actionable patient record for providers across the care continuum.

This approach brings CCDs and HL7 messages together in one exchange, supporting stronger interoperability and encouraging broader participation, particularly from Medicaid organizations, by delivering clear, reciprocal value: **the more data participants contribute, the more data they receive.**

Continuity of Care Documents (CCDs)

CCDs are electronically generated, patient-specific clinical summaries created within an electronic health record (EHR). They support care transitions such as referrals, hospital discharges, and follow-up care by ensuring providers have timely access to comprehensive patient information.

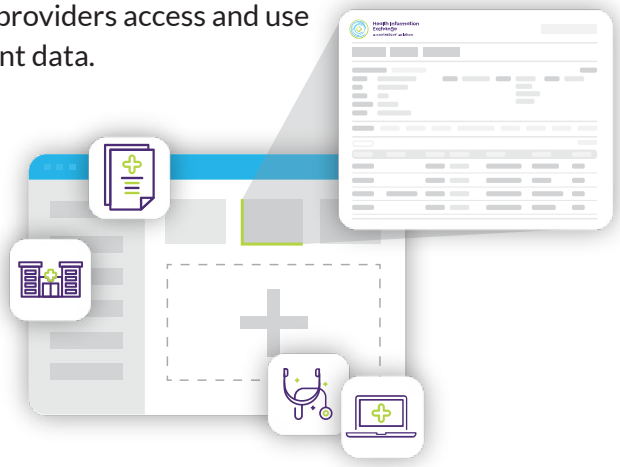

This information includes:

- Patient demographics
- Medical and problem history
- Diagnoses and procedures
- Medications and allergies
- Encounter and visit history
- Lab results and immunizations
- Health risk factors

HL7 Event Data

HL7 messages deliver near real-time event Notifications, helping care teams respond quickly and coordinate care more effectively.

Together, CCDs and HL7 provide both clinical depth and real-time awareness, improving how providers access and use patient data.

Patient data from all major health systems in Colorado

Denver Health · UCHealth · HCA HealthONE · Intermountain Health · Children's Hospital Colorado

Next Steps

Contact us at ***getconnected@contexture.org*** to see if you qualify and get started today. Your Contexture Engagement Manager will gather the required information to determine eligibility and submit it to HCPF for approval.
